

Combining Technologies
into Highly Effective Solutions

GENERAL INFORMATION

CUSTOM Group of Companies is a collaboration of international companies that work in different fields of business across Russia and Asia.

CUSTOM GC provides a full cycle of complex supply of high-quality industrial equipment and process control systems. We offer a full range from concept design to maintenance and technical support.

Geography of Procurement and Production: Russian Federation, China, Türkiye, UAE, Kazakhstan, Hong Kong, India, Europe.

Geography of Sales: Russian Federation, Asia, Iran, Kazakhstan, Türkiye, China.

Development and production of own solutions:
Russian Federation.

MAIN BUSINESS AREAS

Turn-key complex supplies: project management, concept design, technology audit and expertise, pre-qualification, selection of reliable vendors and solutions, production process supervision, quality testing, pilot testing, certification, procurement and logistics.

Development and production of own solutions: to build process control systems: design, engineering and production of solutions, software development.

Service assistance and qualified technical support: guaranteed quality of supplied products at every stage of the project.

INDUSTRY SEGMENTS

Oil & gas enterprises, oil tank farms, oil refineries

Petrochemical enterprises

Mechanical engineering enterprises

Building and utility organizations

Mining and processing integrated plants

Engineering integration companies

COMPLEX SUPPLIES

Developed competence base and strategic partnership with global vendors.

Effective management of international procurement, technical supervision and monitoring by means of authorized representatives in China, Türkiye, UAE, Kazakhstan, Hong Kong, India and Europe.

Establishment of Joint Ventures and production localization.

Profoundly built logistics routes and business processes. Agile solutions, adaptability to change, **sufficient resources and professional team.**

Participation in large investment **projects.**

We guarantee that our clients will have their job done within a tight time frame and in a strict compliance with the standards and the technical specifications.

PRODUCTION

**8 YEARS
ON THE
MARKET**

Owned production facilities; professional and competent engineers, design engineers, software engineers, research and development engineers; multi-level test system. All of them allow to develop and produce highly efficient products.

**Programmable Logic
Controllers, Intrinsic
Safety Barriers**

**Automated filling
systems**

**Cabinet equipment for
APCS**

The manufactured equipment is successfully operated by large oil production and industrial companies in Russia, such as: [Rosneft](#), [Lukoil](#), [Gazprom Neft](#), [Tatneft](#).

**All operations strictly comply
with the certified technologies
to maintain the high quality of
manufactured products.**

ENGINEERING CENTER

Development of the circuit technique and software

Electronics assembly & repair shop

Electrotechnical test lab

PRODUCTION CYCLE

- Engineering and process design
- Automated acceptance and income inspection of electronic components
- Assembly of modules and controllers
- Configuration and calibration of modules and controllers, upgrade of firmware
- Tests:
 - performance tests for up to 72 hours, as per Test Plans
 - heat chamber test
 - reporting on all results
- Mill tests including stress runs
- 100% output inspection

OFFERED EQUIPMENT

Programmable Logic Controllers and Intrinsic Safety Barriers

- Own production

Cabinet and Board Equipment

- Own production

Instrumentation

- OEM

Loading/Discharge Pipe Racks

- Own production

Pumping Equipment

Shut-off valves

Electric Actuators and Control Valves

- OEM

All products are certified and come with a warranty and service maintenance.

EXPERIENCE

Developing and delivering bitumen top loading leak-proof devices

Developing and delivering loading systems

Delivering loading devices for quantity metering systems and automated loading systems

Developing and delivering sodium hydroxide top discharge devices

Delivering a calibration unit, oil products loading/discharge devices

Fabricating and delivering cabinets for the automated dispatch control system of power supply and metering

Delivering K15 controllers with software for the automated group metering unit

Replacing the controller equipment for the automated group metering unit or the automated loading system

Developing and delivering flare systems

Delivering K15 modular controllers for the automated group metering unit and float gauge position indicators in a separator tilt meter

Delivering ball valves with electric actuators

Ultrasound flowmeters
